

SIMPOD - Technical Summary

SIMPOD (Smart Integrated MEV & Profit-Oriented DeFi) is a modular infrastructure designed to capture, ex-

Core Innovations:

- SCORE-L: A reputation engine that ranks bots and actors based on performance and reliability.
- Modular Executors: Smart contracts designed for composable and customizable liquidation logic.
- Flash Loan Compatibility: Built-in support for major DeFi protocols.
- Transparency Layer: Public panel for monitoring execution flow and history.
- LaaS Gateway: Enables external actors to plug into the SIMPOD and earn.

This document serves as a technical overview of the project's vision, architecture, and potential.
